\*2010 Cost

> Protect customers from risk

> Co-innovation with suppliers

 Enable colleagues to buy what they need quickly and easily

You need modern, smart, flexible software

54%

of consumers... like to buy products that are environmentally friendly

#### You face many conflicting priorities

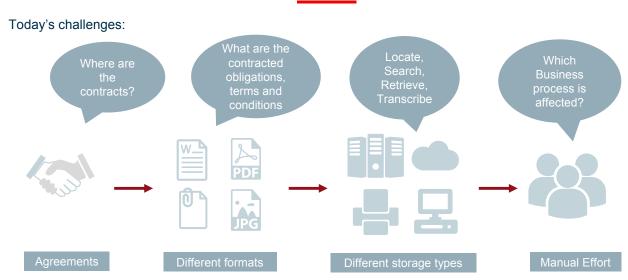

Customers care who you pick as suppliers...

- Safe & Secure
- Reliable
- Ethical

### **Industry Insights Document Management Challenges**

47% of firms use spreadsheets to track issues and only 12% of firms feel their risk management tools are well integrated into their overall risk management reporting systems - EY TPRM survey

### Global Insights into Third Party Risk Management

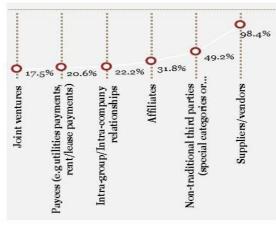

Recent *Third Party Risk Management* survey has also revealed that a growing number of financial institutions are relying on technology to enable their TPRM programs, however response times for key reporting continues to be a challenge:

#### **TPRM and Cyber Security**

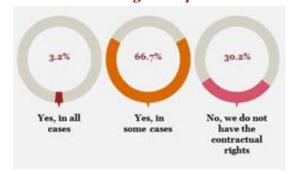

A number of recent cyber security incidents linked to 3<sup>rd</sup> or 4<sup>th</sup> parties highlight the need for a strong Enterprisewide TPRM program:

- Sears, Delta Airlines and Best
  Buy, 2018 data breach occurred
  through a common third party
  providing services related to online
  chat, virtual agent, etc. allowing them
  to access payment information
- Google, 2017 the third party of one of the travel providers used by Google (i.e. fourth party) was breached leading to cyber attackers entering the network and accessing Google employee information
- Verizon, 2017 the business partner of Verizon who facilitates customer service calls had used a third party to provide web services support (i.e. fourth party to Verizon). Cyber attackers had entered through the fourth party gateway and ultimately obtained access to millions of records of Verizon customer data.

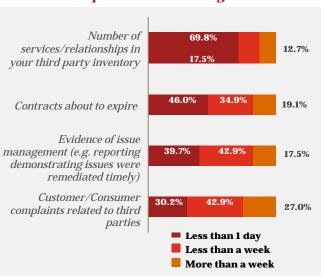

#### Scope of organization's TPRM program?

# Contractual rights to perform due diligence or monitoring on 4th parties?

# How quickly would your organization be able to report on the following?

#### TRPM Program Organizational Alignment

The TPRM functions organizational alignment is one of the most challenging decisions faced by many institutions. Outlined below are the three common reporting relationships we have observed across the financial services industry.

#### **Industry Observed Model 1**

TPRM direct report to CPO with dotted line reporting to ORM

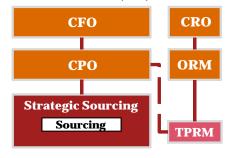

#### **Key Highlights**

A direct reporting line to a Sourcing function can help a TPRM function stay close to the business and become integrated into an organization's overall sourcing lifecycle. However, the 1st line alignment of this model can create difficulties in demonstrating the third party risk related independent challenge, which would need to be executed by ORM.

#### **Industry Observed Model 2**

TPRM function is bifurcated from Strategic Sourcing and reports to ORM and eventually the Chief Risk Officer (CRO)

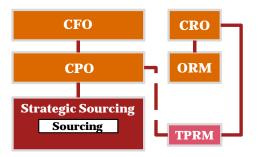

#### **Key Highlights**

A direct reporting line into ORM establishes TPRM as an independent 2<sup>nd</sup> line of defense function. This reporting structure enables the TPRM function independently challenge the 1<sup>st</sup> line of defense, however TPRM related activity execution is placed more squarely on the Sourcing function and the Business, without the benefit of a first line embedded TPRM function.

#### **Industry Observed Model 3**

TPRM function is bifurcated from Strategic Sourcing and reports to the Chief Risk Officer (CRO)

#### **Key Highlights**

A direct reporting line into the CRO establishes TPRM as an independent  $2^{nd}$  line of defense function. Similar to model 2, this model enables the TPRM function to independently challenge the  $1^{st}$  line of defense, and in some organizations, elevates the TPRM function's stature through its direct reporting line to the Chief Risk Officer.

# **Overview Industry Trends**

#### Robotic Process Automation (RPA)

- an automation based on defined rules
- can perform tasks involving different existing systems and applications
- adaptable to the size of the organization

example of application: selfassessment of third party risks, risk appetite profile, production of risk reports

#### **RPA Cognitive**

- Trend identification
- Predictive analysis
- Machine learning
- · Unstructured data management

example of application: scenario analysis, analysis of operational losses

# Artificial Intelligence (AI)

- Automation of decisions
- Optimization
- Anticipatory actions

example of application: scenario analysis and decision-making based on projections, analysis of risk assessments, loss analysis and anticipation of operational incidents

### Proactive risk management and oversight is an imperative

Third party risk is a combination of other risks with various degrees of severity based on the maturity of the relationship with the third party. The potential risk exposure from doing business with third parties goes well beyond direct financial loss and includes reputational damage, regulatory scrutiny and customer attrition.

The 3rd Party Risk Domains listed above also apply to 4th parties (sub-contractors) as an extension of 3rd party risks

2. Policies & Procedures

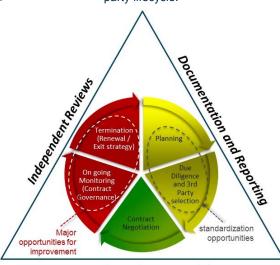

3. Roles & Responsibilities

10. Inventory

The process to manage risks across the third-party lifecycle:

**Oversight and Accountability** 

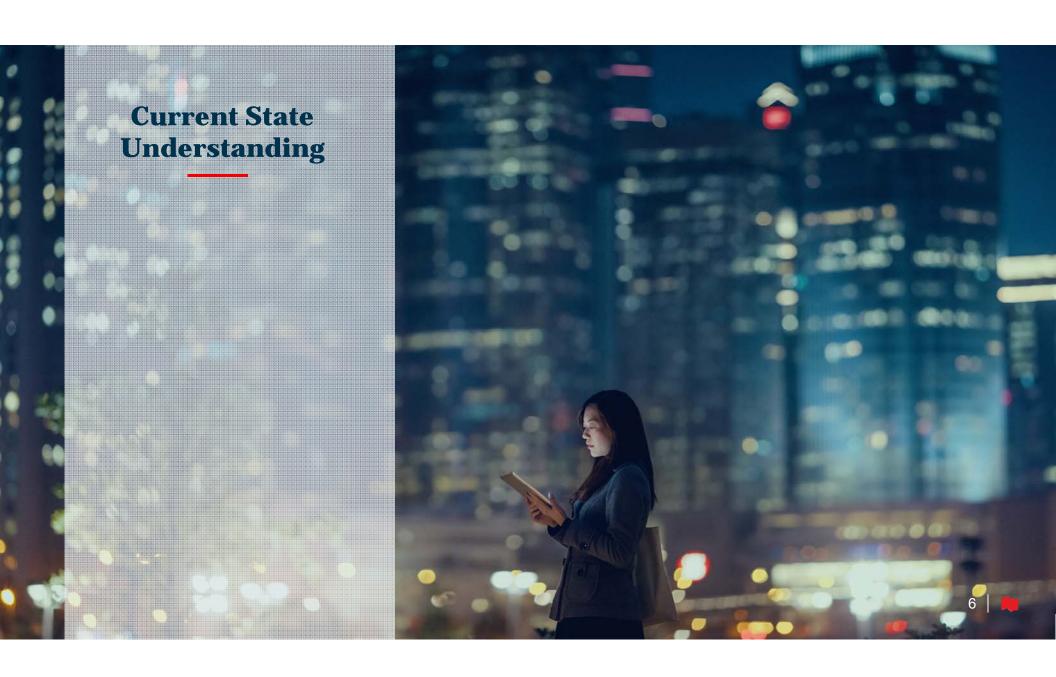

### Focus on 3rd party risks to meet business requirements

- Business opportunity to capture 3rd party<sup>(1)</sup> management value (savings, avoided costs and uncounted gains such as acquisition of high-level expertise, talents, agility in peak periods, modernization of processes, mitigation of risks, customer satisfaction, etc.);
- Increased dependencies on our 3rd parties to deliver the client promise;
- □ Rapid changes in business landscape<sup>(2)</sup> requires a formalized proactive risk management and oversight to lessens probability of business disruption;
- Strong recommendation from regulators to implement a formal framework and oversight pressures worldwide to add controls for 3PRM;
- Major cultural shift is required for successful deployment of a robust framework.

Failure to effectively manage 3rd party risks could potentially expose organizations to security/data breaches, service disruptions, regulatory penalties, financial loss, litigation or reputational damage

<sup>(2)</sup> Appendix B: Emerging Industry Trends

# **Current State Executive Summary**

Topic	Industry Current State	Assessment	
Strategy & Organization	The Strategy and Organization is generally aligned overall with regulators' expectations and industry peers, however the operating structure is not clearly defined nor understood by stakeholders.		
Policies & Procedures	Policies are generally aligned with regulators' expectations overall, however formal procedural documentation to define the roles, responsibilities, and expectations of stakeholders could be improved as well as a standardized process for communicating the policies and procedures.	^실	
Roles & Responsibilities	Overall, the role of the Risk Management Committee is generally aligned with regulatory expectations, however procedures on the reporting and escalation process should be defined. High-level roles and responsibilities are defined, however, the roles defined in the RACI require updating and are not clearly outlined in the policy.	Q	
Onboarding	Overall, the onboarding process is generally aligned with industry peers, however the process is not consistently followed by all business lines. There is still room to review and improve this process.	74 <u>4</u>	
Risk Assessments	The Risk Assessment process is generally aligned with regulators' expectations overall, however there is limited documentation. Most organizations are reviewing and improving this process to make it more efficient and simple.	74 <sup>2</sup>	
Due Diligence	Supporting documentation related to the due diligence review is not clearly defined and is not stored in a central location.	443 442	
Contracting	Overall, the contracting process is generally aligned with regulators' expectations and industry peers, however as per management, some agreements are signed before risk assessment and due diligence. Improvement of this process would reduce the risk level.	742 -	
Monitoring	The operating model related to the monitoring process and the issue management process (including escalation process, issue follow-up, etc.) are not fully designed.	Q	
Termination	The Termination process is not formalized and/or standardized in the majority organizations.	Q	
Inventory	Organizations do not currently have the proper tools and processes in place to centralize the 3 <sup>rd</sup> party inventory.	Q	
Risk Metrics & Reporting	There is an opportunity to improve the reporting related to KPIs or KRIs. The process related to annual attestation is under review.	Q	
Tools & Technology	The tools and technology currently used are not optimal. There is an opportunity to review and improve book of record for single source of truth.	_47 <del>7</del>	

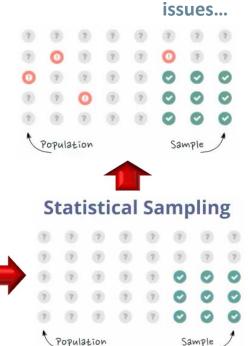

# **Risk Based Approach**

#### What?

- Improve 3<sup>rd</sup> party performance management
- Proactively manage risks (identify, take action and monitor)
- **Balanced portfolio management**

Unbiased review of

#### How?

- Smart data ingestion
- Complete data analysis
- Improved detection effectiveness

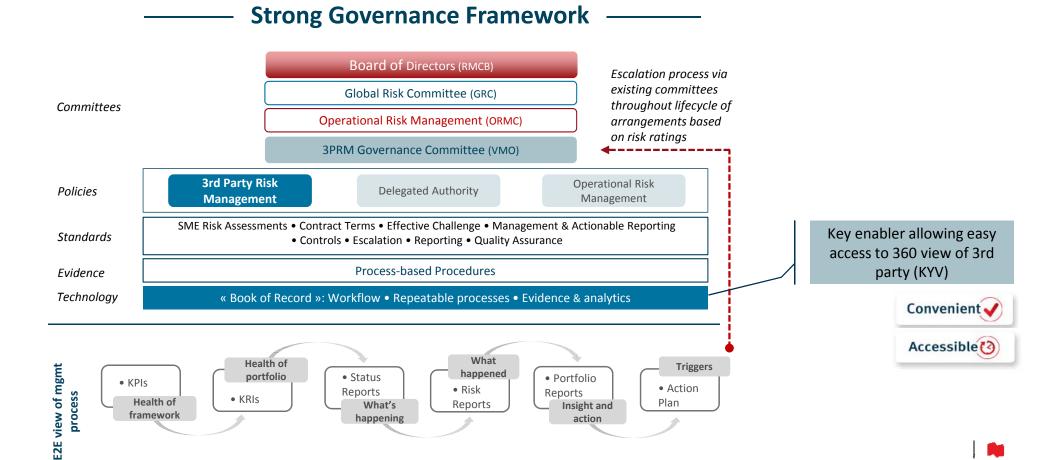

Finding issues rather than confirming their absence

### Oversight & Governance

Principles of good governance & key model elements

# **Key Enablers Analytics & Actionable Reporting**

# Defined Risk Appetite Statement and KRIs

Based on strategy and business practices, a *risk appetite* should be targeted in recognition of 3rd party risks inherent for each LOB models.

# Centralized Data Integrity and Analytics

Clearly defined risk based frameworks exist to determine the re-assessment frequency of 3rd party. Elements of residual risk are used to determine the frequency of assessments to perform.

Systematic solution used to store files and data; process or work flow fully enabled by technology and continually assessed for efficiency and alignment with the process.

#### Supplier Information & Performance Management (SIPM)

SIPM is the enterprise tool to identify, assess, manage and monitor 3rd party risk throughout the partnership lifecycle

Workflow • Central Repository for pre-defined artifacts • Notifications

• Track open items • Reporting • Analysis • Change Management

# **NBC TPRM Program Maturity Progression**

	Level 1 Initial	Level 2 Repeatable	Level 3 Defined	Level 4 Managed	Level 5 Optimized

#### **TPRM Program Current vs. Future State**

#### Today **Tomorrow**

### **Executive Summary**

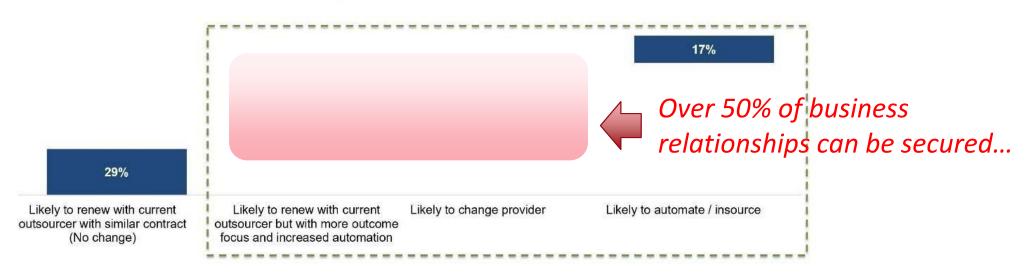

Organizations will be leveraging technology to energize 3<sup>rd</sup> party relationship management by:

- Giving relationship management a strategic role in driving improved trust, alignment and collaboration between an organization and the 3<sup>rd</sup> party.
- Accelerating transition to a scientific, data-driven management of strategic 3<sup>rd</sup> party relationships leveraging automation and advanced analytics. This approach makes the relationship management process more measurable and objective.
- Driving improved results in strategic 3<sup>rd</sup> party engagements through technologydriven relationship management strategy.

# **Industry Insights**Opportunities to growth market share

### Only ~30% current outsourcing contracts are safe!

What are your plans regarding current outsourcing / managed services agreements you have?

~70% outsourcing clients are expected to change their outsourcing relationships in some shape or form

### **NEXT STEPS**

- > Validate current state with regulatory requirements (your organizations or clients)
- > Plan workshops with key stakeholders and prioritize according to gaps
  - Risks identification and assessments
  - Actions required to mitigate
  - Monitoring and report to senior management

# **LET'S KEEP GOING!**

"Those who are crazy enough to think they can change the world usually do."

**Steve Jobs** 

# 3rd Party Definition (Appendix A)

	General definition	An entity, including individuals and affiliates, that has a business relationship with the institution or its customers, and is not itself a customer. Third party relationships include:
How 3rd parties are defined	Vendor 3rd Party	'Vendor' third party are service providers that deliver a product or service to the institution. These relationships are typically sourced through a sourcing / procurement process. Payment is typically transacted by Accounts Payable.
rion ora parties are acimea	Non- Vendor 3rd Party,	'Non-Vendor' third party relationships are typically acquired by a business line / segment directly, not through a sourcing / procurement function. Financial remuneration, if applicable is typically transacted outside of Accounts Payable processes. These relationships may be managed solely by a business line / segment, or managed in conjunction with a corporate risk management function.

or)	Specialized Analysts and Advisors	Counterparties
(Non-Vendor)	Affiliates	Debt Underwriters / Securitization Firms / Trustees
n-V(	Affinity Relationships	Financial Utilities
(No	Alliances and Partnerships	Government Special Purpose Entity (GSE)
IES	Brokers	Indirect Lending
OR	Correspondent Banks and Wholesale Banking	Joint Marketing Partners
CATEGORIES	Rating Agencies	Tenants
	Servicers	Trade Associations

# Emerging Industry Trends (Appendix B)

As our procurement organization matures, the focus needs to be more than just cost savings; we need to be proactively involved in strategic initiatives and creatively protect the organization.

Procurement and Finance Alignment	Essential partnership between procurement and Finance (BU CFO) to track and record savings
New Risk Domains	<ul> <li>Extension of 3rd Party Risk Management to address additional risks beyond Information Security and Supplier Performance (Reputation, Compliance, or Geo-political Risk)</li> </ul>
Sub-Contractors (4th Party Risk)	<ul> <li>Inclusion of Sub-Contractors in the Risk Management Program, including inventory, assessment and monitoring (Supply Chain Management)</li> </ul>
Innovative Solutions	<ul> <li>Expand supply market research to include new innovative solutions (i.e. Cloud, social media, etc.)</li> </ul>
Revenue Optimization	<ul> <li>Promote and develop the customer portfolio within our supplier community and maximize value to the organization by being thoughtful about our customer/supplier relationships</li> </ul>
International Expansion	Support strategic initiatives in international expansion, licensing, e-Commerce growth
M&A / Divestitures	<ul> <li>Ongoing M&amp;A and Restructuring activities have created new sourcing leverage and required new supply strategies</li> </ul>
Sustainability	<ul> <li>Increasingly, customers and governments are demanding for plans to make operations more sustainable and from a more diverse supplier base</li> </ul>
