CHINA FRANCE

Macron urges cooperation with China in artificial intelligence

afp-epa | Beijing | 9 Jan 2018

The French President on Tuesday stressed the importance of boosting cooperation between France and China in the field of artificial intelligence (AI).

Emmanuel Macron, on the second day of his official visit to China, spoke at the conclusion of a Sino-French forum on artificial intelligence and presided over the signing of various agreements on cooperation in technology and trade.

The forum, held at an incubator for emerging companies situated close to Beijing's financial district, was attended by researchers, executives and professionals from both countries, who discussed boosting exchanges and joint ventures in this sector.

The French president said AI is a matrix which helps in the development of various economic areas and can transform entire sectors of economic activity.

GLOBAL EXCHANGES ON AI

In his state visit to China earlier this month (January), French President Emmanuel Macron stressed the importance of boosting cooperation between France and China in the field of artificial intelligence.

Speaking at the conclusion of a Sino-French forum on artificial intelligence in Beijing, Mr Macron presided over the signing of various cooperation agreements on technology and trade.

Mr Macron said China had a great advantage in the AI sector given its enormous domestic market.

While talking with Mr Macron, Mr Xi called for integrating the development strategies of China and France, strengthening innovative cooperation, and achieving common development in the areas of digital economy and artificial intelligence.

Prime Minister Sipilä and French President Macron announced initiatives on EU defence and AI

Government Communications Department © 30.8.2018 16.07 | Published in English on 30.8.2018 at 16.31
 PRESS RELEASE 390/2018

Prime Minister Juha Sipilä and President of France Emmanuel Macron met in Helsinki on 30 August. Prime Minister Sipilä and President Macron discussed topical EU matters, such as trade policy, multiannual financial framework negotiations, migration and the development of the Economic and Monetary Union, EMU, and single market. In connection with the meeting, declarations were issued on the development of the EU defence cooperation and on utilisation of artificial intelligence, AI.

French-Finnish Joint Statement for Cooperation on Artificial Intelligence

Future of Europe in the age of artificial intelligence

Digital transformation and artificial intelligence (AI) are global phenomena that transform our world in unprecedented ways. The digital transformation has cross-cutting effects on society and economy in Europe. For the European Union, public and private sectors and citizens, digitalization is one of the key success factors offering extensive potential for future growth and competitiveness.

AI-based systems are increasingly used in private and public sectors and these technologies are already present in our citizens' everyday lives. Thus, artificial intelligence provides tremendous social and economic opportunities but also challenges to be tackled.

It is crucial for Europe's global competitiveness to stay at the forefront of the development and use of digital technologies by actively supporting innovation, and in particular disruptive innovation.

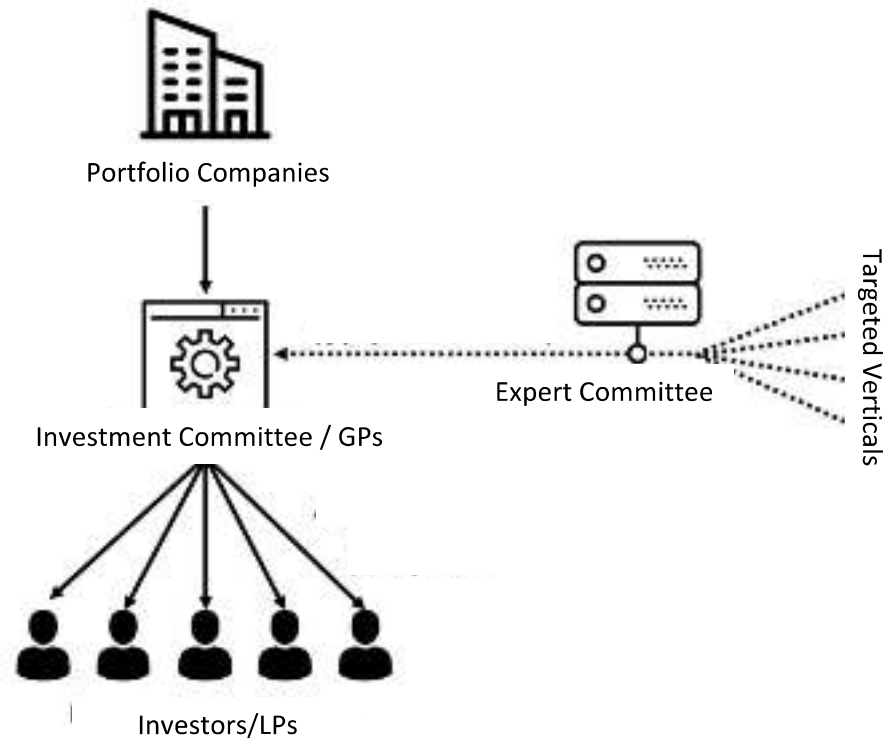

AI-cooperation between France and Finland

France and Finland recognize the need for governments' active role in promoting fair, inclusive and human-centric vision of artificial intelligence that builds on and fosters trust. In order to ensure confidence and acceptability of artificial intelligence in society, it is essential that citizens and businesses can trust artificial intelligence based systems. The concrete steps we take now will define the future world.

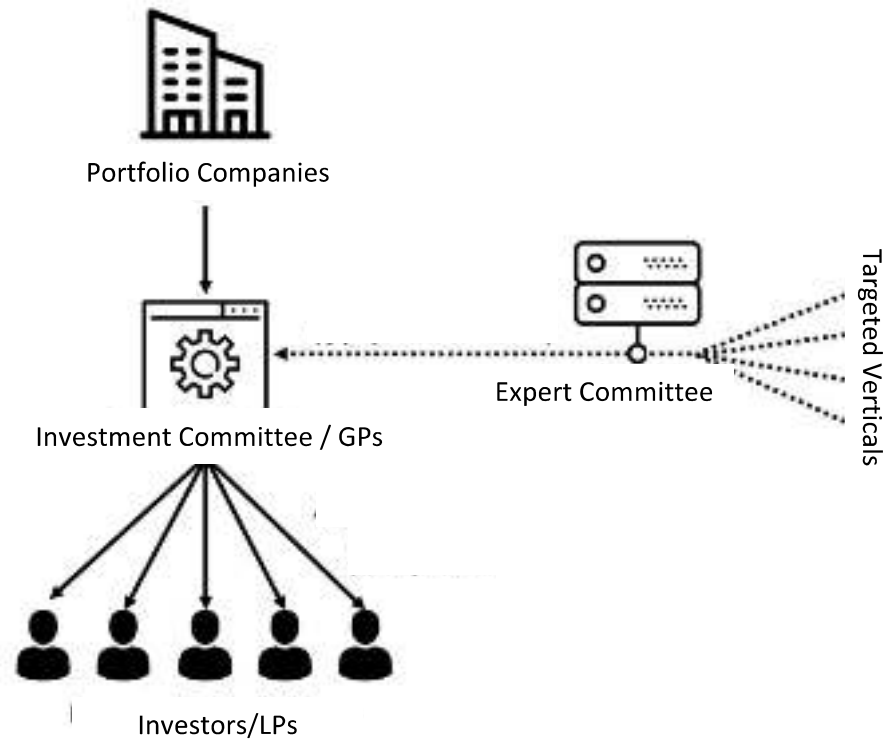

Next steps

The governments of France and Finland recognise the importance of bilateral cooperation in the area of artificial intelligence and agree on working jointly to develop and promote joint recommendations in the area of artificial intelligence, including financial issues for AI infrastructures, both at the national and at the European Union level. Considering the importance of the matter and the timeframe, an AI-deployment action group will be set up in October 2018 to carry out the task. A work programme and a timetable for follow-up will be defined in January 2019. Evaluation of the first results of the group's work will be available at the end of 2019. Details concerning the group will be defined separately.
